Lab Week 5, Day 1 – September 30, 2009

1. Exam Review Practice for Writing a Small Program by hand (not with Visual Studio):

Suppose that we have a form with two textboxes with names Textbox1 and Textbox2, and a label named Label1. Write the code that takes an integer from the first textbox and assigns it to a variable called *number1* and the code that takes an integer from the second textbox and assigns it to a variable called *number2*. Then add the two numbers together. If the sum is less than 0, set the label to show “Negative” and otherwise “Positive”.

Write your program here and include declarations for the variables *number1* and *number2* and any other variable(s) that you used:
